A request to the Honourable Jonathon Wilkinson to have the IAAC assess the CanWhite Sand project was initiated by Don Sullivan/What the Frac Manitoba, who “took this approach because we have lost confidence in the Province of Manitoba’s environmental review process with respect to this proposed project.”

The following link is to the Impact Assessment Agency of Canada (IAAC) regarding CanWhite Sands Corp.(CWS) mining and processing of silica sand proposed project.

<https://iaac->

iaac.gc.ca/050/evaluations/proj/80974...

it contains 4 requests to the Minister, comments from concerned citizens, lots of information, science, data, all proving that this project deserves a federal review.

Click “list all records”.

Of particular interest is reference number #35 from the ECCC which confirms WTFM science.

#3 is commentary sent to the EAB that the provincial government has yet to make public.

#28 is in response to a letter sent to the IAAC by CanWhite Sands #15.

Check it out.

There is still time to “submit a comment” to request Hon. Jonathon Wilkinson grant the CWS project a comprehensive federal review.

Water, Land and Air is the life support system. Let’s give it the full attention and respect that it deserves.
